

DISPATCH UPGRADE

OUR CLIENT

Greencore Group plc is a leading international manufacturer of convenience foods, predominately for own brand products.

THE PROJECT

Meller have worked with Greencore over the last three years focusing on feasibility of projects through to delivering live projects.

This project relates to the Dispatch Upgrade at Greencore Food to Go site at Manton Wood. The project relocated two blast chillers and two new mezzanines resulting in the creation of space to improve storage and dispatch facilities.

The project included two new blast chillers, air lock and battery charging area, two new mezzanines and pallet hoist, relocation of two main staircases into a low production care facility and a relocation of existing laboratory.

THE CHALLENGE

The main challenge of this project was working in a heavily restricted spatial environment and a live production facility.

The entire project was redesigned and cost engineered to coincide with the clients new budget. The existing despatch facility was very small and compact. The scope was to install a new mezzanine over to increase floor capacity, whilst still in operation and avoiding and loss of vehicle docks. Part of the project was to increase the size of the existing blast chillers without taking them out of commission.

DELIVERING SUCCESS

By delivering an innovative approach and dedicated commitment, Meller were able to find the best possible answers for our clients, enabling us to build successful projects and long term relationships.
